# Tongass National Forest Land Management Plan Revision Supplement EVER HUNT DEER

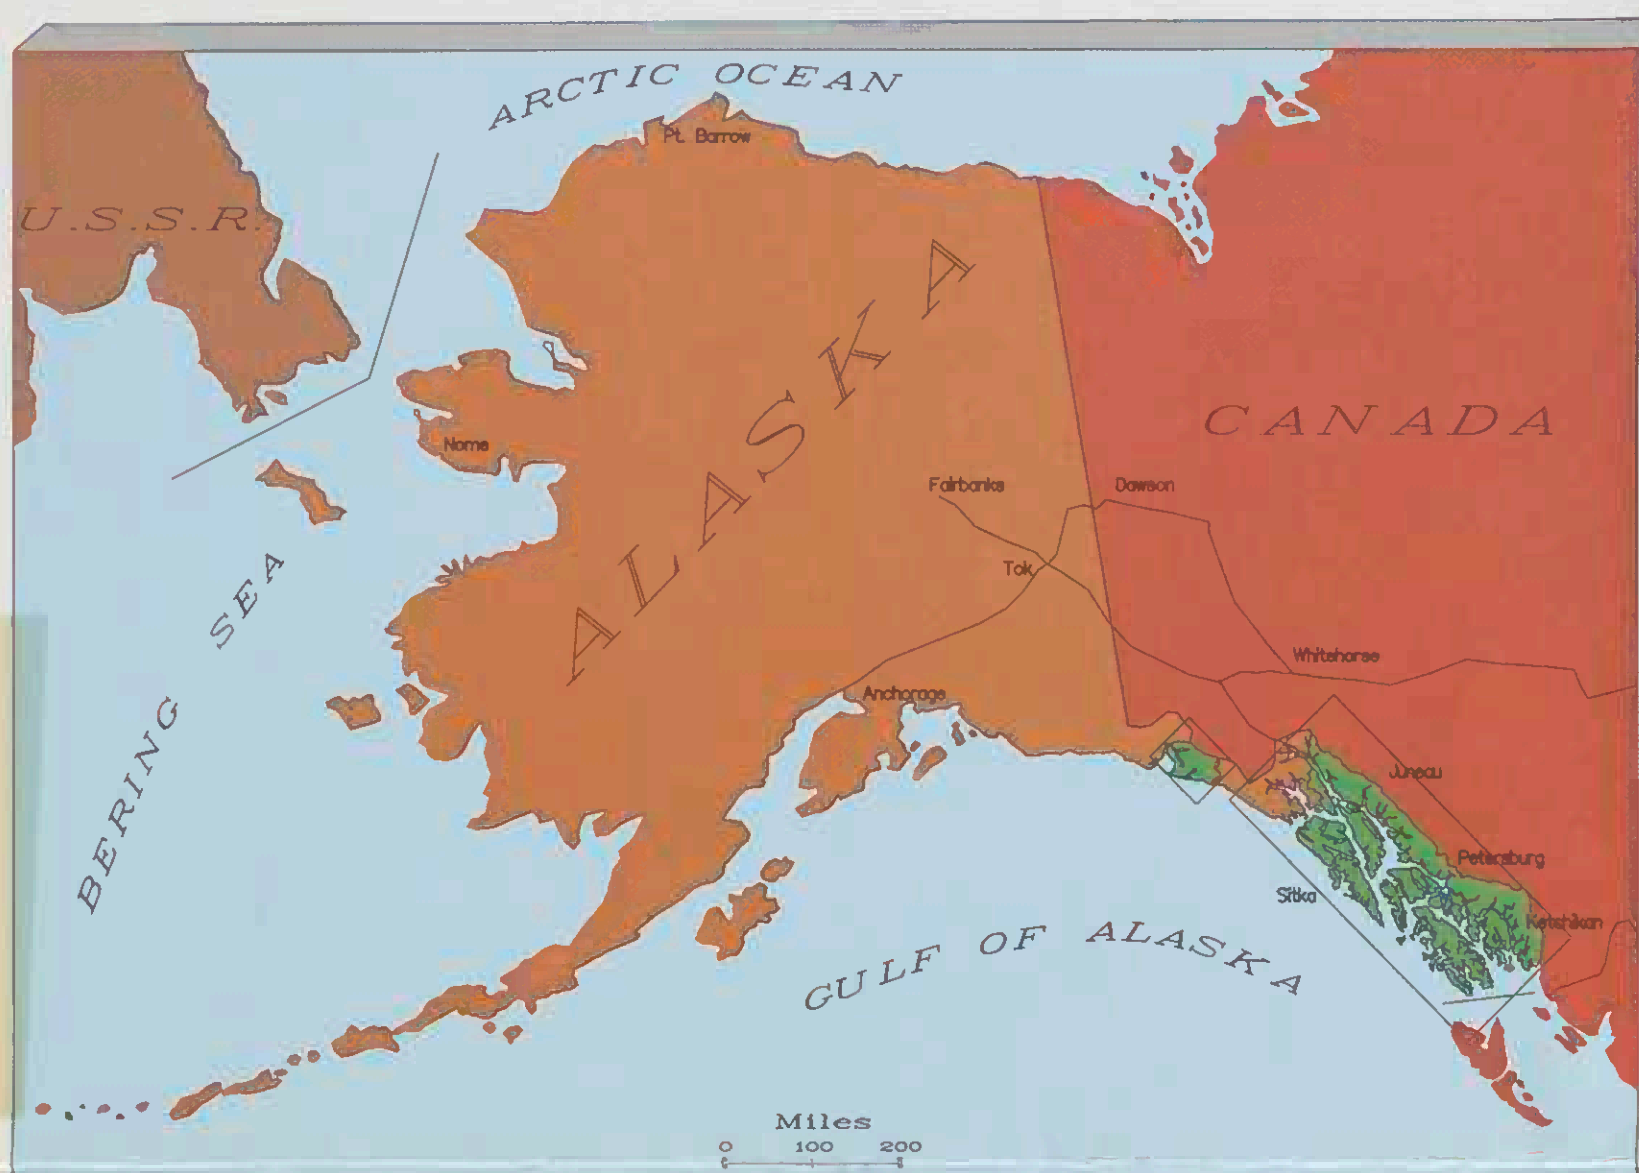

## Subsistence

Areas Ever Used for Deer Hunting by  
Southeast Alaska  
Subsistence Households

### Legend

### VICINITY MAP

The information on this map illustrates noncommercial deer harvest activities. Information was gathered through the Tongass Resource Use Cooperative Survey (TRUCS), which was jointly conducted by the University of Alaska, Institute of Social and Economic Research; Alaska Department of Fish and Game, Division of Subsistence; and the USDA Forest Service, Alaska Region.

This map data was gathered in 30 rural communities in Southeast Alaska between October, 1987 and March, 1988. A series of structured interviews were conducted in randomly selected households in communities throughout the Region. Respondents were asked to indicate on a 1:250,000 scale map the areas they or other members of their household had ever used for hunting deer during the time they lived in the community. The resulting household maps were combined to produce this map indicating a generalized pattern of resource harvesting for the Region as a whole.

Since all map information was developed from a sample of community residents, this map may be an incomplete representation of the Region's use areas. Mapped information displayed here is intended to be used in conjunction with individual community reports and additional information developed by the cooperating agencies.
